

WGZ-20 DIGITAL TURBIDIMETER TURBIDITY METER

Product Description

Zhifong

Summary of Functions:

WGZ Series scattered light turbidity meter is used for measuring the scattering degree of the lights generated by the insoluble grain matters suspended in water or transparent liquids, with capability to characterize the content of these suspended grain matters.

It can be broadly applied in the measurement of turbidity in power plants, waterworks, treatment stations of domestic sewage, beverage factories, environmental protection departments, industrial water, wine and pharmacy industries, epidemic prevention divisions, hospitals, and etc.

Product Characteristics:

- Streamline outward,Beautiful international fashinable snow lacquer
- wide&bright LCD display
- Operation easily,wide measuring range,high rate of function price
- Special fixed position construction,high precision light parh
- Adopting low-drift and high-accuracy integrated circuit, efficient and timeproof light source, effectively ensuring long reliable performance
- Added chromaticity compensation system,avoided the disturber of sample color

Specifications:

- Model:WGZ-20
- Minimum Principle:90° scattered light
- Minimum readout NTU:0.1
- Measuring range NTU & Basic error F.S:0-200 8%(2.5%F.S)
- Repeatability:0.8%
- Zero draft NTU:0.8%F.S
